

ABOUT TECHNISOFT PTY LTD

Technisoft Pty Ltd is a leader in **INNOVATIVE SOFTWARE SOLUTIONS**. Our core focus is to make the complex task of managing plant, infrastructure and field technicians easy.

Our software is used worldwide, in many industries, by businesses managing their organization in-house, and by businesses providing outsourced management services.

It began with our flagship product, Service Manager™, the award-winning software that fully integrates with Sage 300 and enables in-depth control of job costing, scheduling of resources, preventative maintenance, service agreements, and field staff directly from your accounting software.

Early on, we earned the distinction of being a Sage Endorsed Development Partner – which is a key differentiator for us. We have received many prestigious Development Awards and continue to listen to our customer requirements which has led to the development of software applications like Report Manager, Advanced Maintenance, Advanced Scheduling and Field Portal, to name a few.

More industry awards followed along with a burgeoning global client-base.

Then we started receiving requests for an offline version of our popular Field Portal application and that led to the development of Field Portal App. Field Portal App keeps your technicians working even when they don't have internet, Wifi or mobile cell coverage.

What can we tell you about our future while we're looking back? We can promise you more of the same. More applications that; streamline business processes, improve efficiencies and reduce overheads.

Where we are at today makes perfect sense when you consider our founder's vision was to create applications that add value to the communities we work in; create jobs, improve everyone's bottom-line and never compromise on service quality or product integrity.

The proof to this claim is the fact that new clients become long-term partners. You might also find it interesting that the same vision has been embraced by Technisoft's own employee culture resulting in virtually no staff turnover.

With the awards and the rewards comes a sense of fulfilment. Technisoft has made a difference in the lives of our clients, our business partners, and employees. We invite you to acquaint yourself with our salient range of products.

We think you'll find that our mantra to
“EXCEED EXPECTATIONS”
has been hard earned and is deserved.

Welcome then to the world of Technisoft, celebrating more than a quarter-century of software innovation.

PRODUCTS

SERVICE MANAGER

Integrates seamlessly into Sage 300.

Manage job costing, preventative maintenance, scheduling of resources, field service, and general equipment servicing.

Equipment transfers, warranty, rental, serial and lot tracking.

Standard and WIP accounting.

Profit analysis.
