

Who is BAASS ?

At BAASS Business Solutions, we provide tailored business solutions to optimize operational performance and drive future growth. For the past 37 years, we have partnered with the best-in-class publishers and third-party providers to provide industry-centric solutions. Our specialized teams of analysts, consultants, and technicians have completed over 5,000 implementations of Sage, Salesforce, and other ISV solutions.

Our Mission

Our mission is to understand where you want to take your organization and build the capabilities you need.

Our Solutions

Enterprise Resource Planning: Our team takes the time to discover your requirements before recommending the best suited ERP solution.

Business Intelligence: Our team offers BI and Budgeting Solutions that include custom operational reports, custom financial statements, data visualization, and warehousing. Our team can enable organizations to transform raw data into actionable insights.

Development: The BAASS Team has created tools to expand the functionality of your ERP solution. We build integrations and deliver business vertical solutions to meet your unique processing needs.

Customer Relationship Manager: Extend your business management tools by overlaying accounting software with sales, marketing, and service functionality. Bring all the pieces of your business together for one effective organization.

Human Capital Management: A software solution that combines human resource functions and processes to streamline HR-related tasks and activities. We implement the right HR solution and add-on tools for you.

Payroll: Our payroll services and solutions help organizations to automate and streamline their process. Our team can review Payroll Setup, generate payroll, offer information Sessions, and provide Training and Support.

Cloud Services: A fully customized, dedicated server with enterprise-grade security for your business. Experience the benefits of on-demand service, flexibility, and cost-effectiveness.

Management Consulting: We enhance existing solutions by implementing a strategic planning process to remove roadblocks. We help customers to overcome challenges like changing business models, poor reporting, compliance issues, rapid growth, technology compatibility, increased operational costs, and change in end users.

Warehouse Management System: A solution that offers visibility and insight into your daily warehouse operations. Make strategic decisions and improve business performance with real-time information on products, inventory, and operations.

Supported Solutions

We support a variety of ERP solutions tailored to the needs of Indigenous organizations and businesses. With third-party applications and custom tools, you can go beyond your core system. By adding capabilities like Accounts Payable Automation, Expense Management, and Fixed Asset Management, you can achieve stronger financial management and greater value from your technology investment.

Sage 50

An accounting software for small businesses who need to simplify admin and processes. Small businesses can automate invoicing and billing, manage inventory, and get real-time financial insight.

Sage 100 Contractor

Helps small to mid-sized contractors manage all phases of construction and service management.

Sage 300

All-in-one business management software to manage finances, operations, and inventory. Sage 300 enables organizations to manage multiple locations across multiple regions, languages and currencies. With Sage add-ons and third-party Independent Software Vendors extensions, users can extend their ERP capabilities.

Sage 300 Construction Real Estate (CRE)

A comprehensive suite of tools for construction and real estate businesses to manage their operations and maintain financial control. It includes capabilities for project management, accounting, job costing, payroll, and reporting.

Sage Intacct

A cloud accounting software designed to streamline financial management for growing mid-sized companies with complex accounting needs. It provides deeper financial insights, enhanced financial controls, integrate with other systems, and the ability to manage multiple business entities and customize business processes.

Sage Intacct Construction

A cloud-based solution designed for construction companies to integrate real-time data, project accounting, and financial reporting to support decision-making and scalability while offering flexibility with its multi-entity and multi-dimensional capabilities.

Sage Construction Management

Provides contractors with the tools needed for effective project planning, resource allocation, and job tracking. It enables better collaboration, budget control, and on-time project delivery through its user-friendly tools for construction projects.

Sage X3

A robust solution for manufacturing, distribution, and business services to manage finances, operations, and supply chain. Sage X3 can be deployed on-premises or in the cloud, based on your needs.
