

A woman with dark hair, wearing a blue polka-dot shirt and a pearl earring, is shown in profile, resting her chin on her hand and looking thoughtfully at a laptop. The background is a bright, out-of-focus office setting.

Have You Outgrown Your Financial Tools?

Uncover the 7 common areas where financial tools may start to limit business processes and growth.

Have You Outgrown Your Accounting Software?

Manual Processes Effecting Efficiency

Technology has become a tool that allows us to be more efficient in handling various tasks. If you're finding that you've been spending too much time on manual data entry or paperwork, it may be a sign that you've outgrown your accounting software. As with manual work, there is also a heightened risk of errors. As such, it's essential for your accounting software to be able to keep up with your company's increase in growth. Whether it be by saving time on data entry and reconciliation or having automated and streamlined business processes, many have relied on accounting software to increase efficiency throughout their organization. With a new accounting software that can handle your business' needs, time that was previously spent on repetitive and manual tasks can now be spent elsewhere.

BAASS Bridge

The BAASS Bridge reads the source system or transactional output file, maps it to a compatible Sage 300 ERP format and creates a transaction batch for processing. Today, most ERP systems allow you to import transaction files in their system. The challenge lies with mapping the fields correctly, imposing required business rules and automating the process. This usually requires expensive custom development.

Have You Outgrown Your Accounting Software?

Lack of Support and Capabilities

As systems age, you may find that there is less support for it. Whether it be because the publisher has begun to stop supporting the products completely, or are hoping for you to upgrade to the latest version, you may be forced to embrace a new accounting system. Although you may fear the implementation or adoption process of a new accounting system, there are risks to sticking to your old one, and it can be costlier to maintain. In addition to the lack of support you may receive, you'll find that your system can be quite outdated in terms of capabilities and security; due to the advancements in technology, this can mean large gaps between your legacy accounting system and the newer ones on the market.

Incompatibility with your Employees

Whether it be due to new management or younger employees, your old accounting software may be simply incompatible with the new demographic. Consider an older accounting system that doesn't support mobile work in the current day. For employees that are working from home or are constantly on the go, this can be a huge problem that hinders workflow and efficiency. Not only so, but with the new workforce having grown up using technology, outdated interfaces may not be very user-friendly, despite having served the older generation of employees well. Moreover, new management teams accustomed to using sophisticated accounting systems at past workplaces may want to adopt them at your organization to foster growth after witnessing the benefits that can be reaped from a more modern system.

Have You Outgrown Your Accounting Software?

Lack of Visibility Across Your Company

As your business grows, it becomes more difficult to keep track of what's happening across your organization.

With key employees being in and out of the office and spreadsheets all over the place, it can be exhausting trying to find some information.

In addition, your business's pile of data will only keep growing. With accounting software more compatible with your needs, you can expect to have access to information instantly, across various areas of your organization. This also means having access to more timely and accurate data in which you can base decisions off of.

BAASS Client Success

tina davies

Tina Davies is a leader in the PMU (Permanent Makeup) Industry, offering services and supplies for Microblading Procedures since 2016. As Tina Davies has continued to growing by seeing increased growth in profits each year, Tina Davies knew they wanted to invest into their Finance Department to find a tool to allow them to scale.

Have You Outgrown Your Accounting Software?

Software Incompatibility

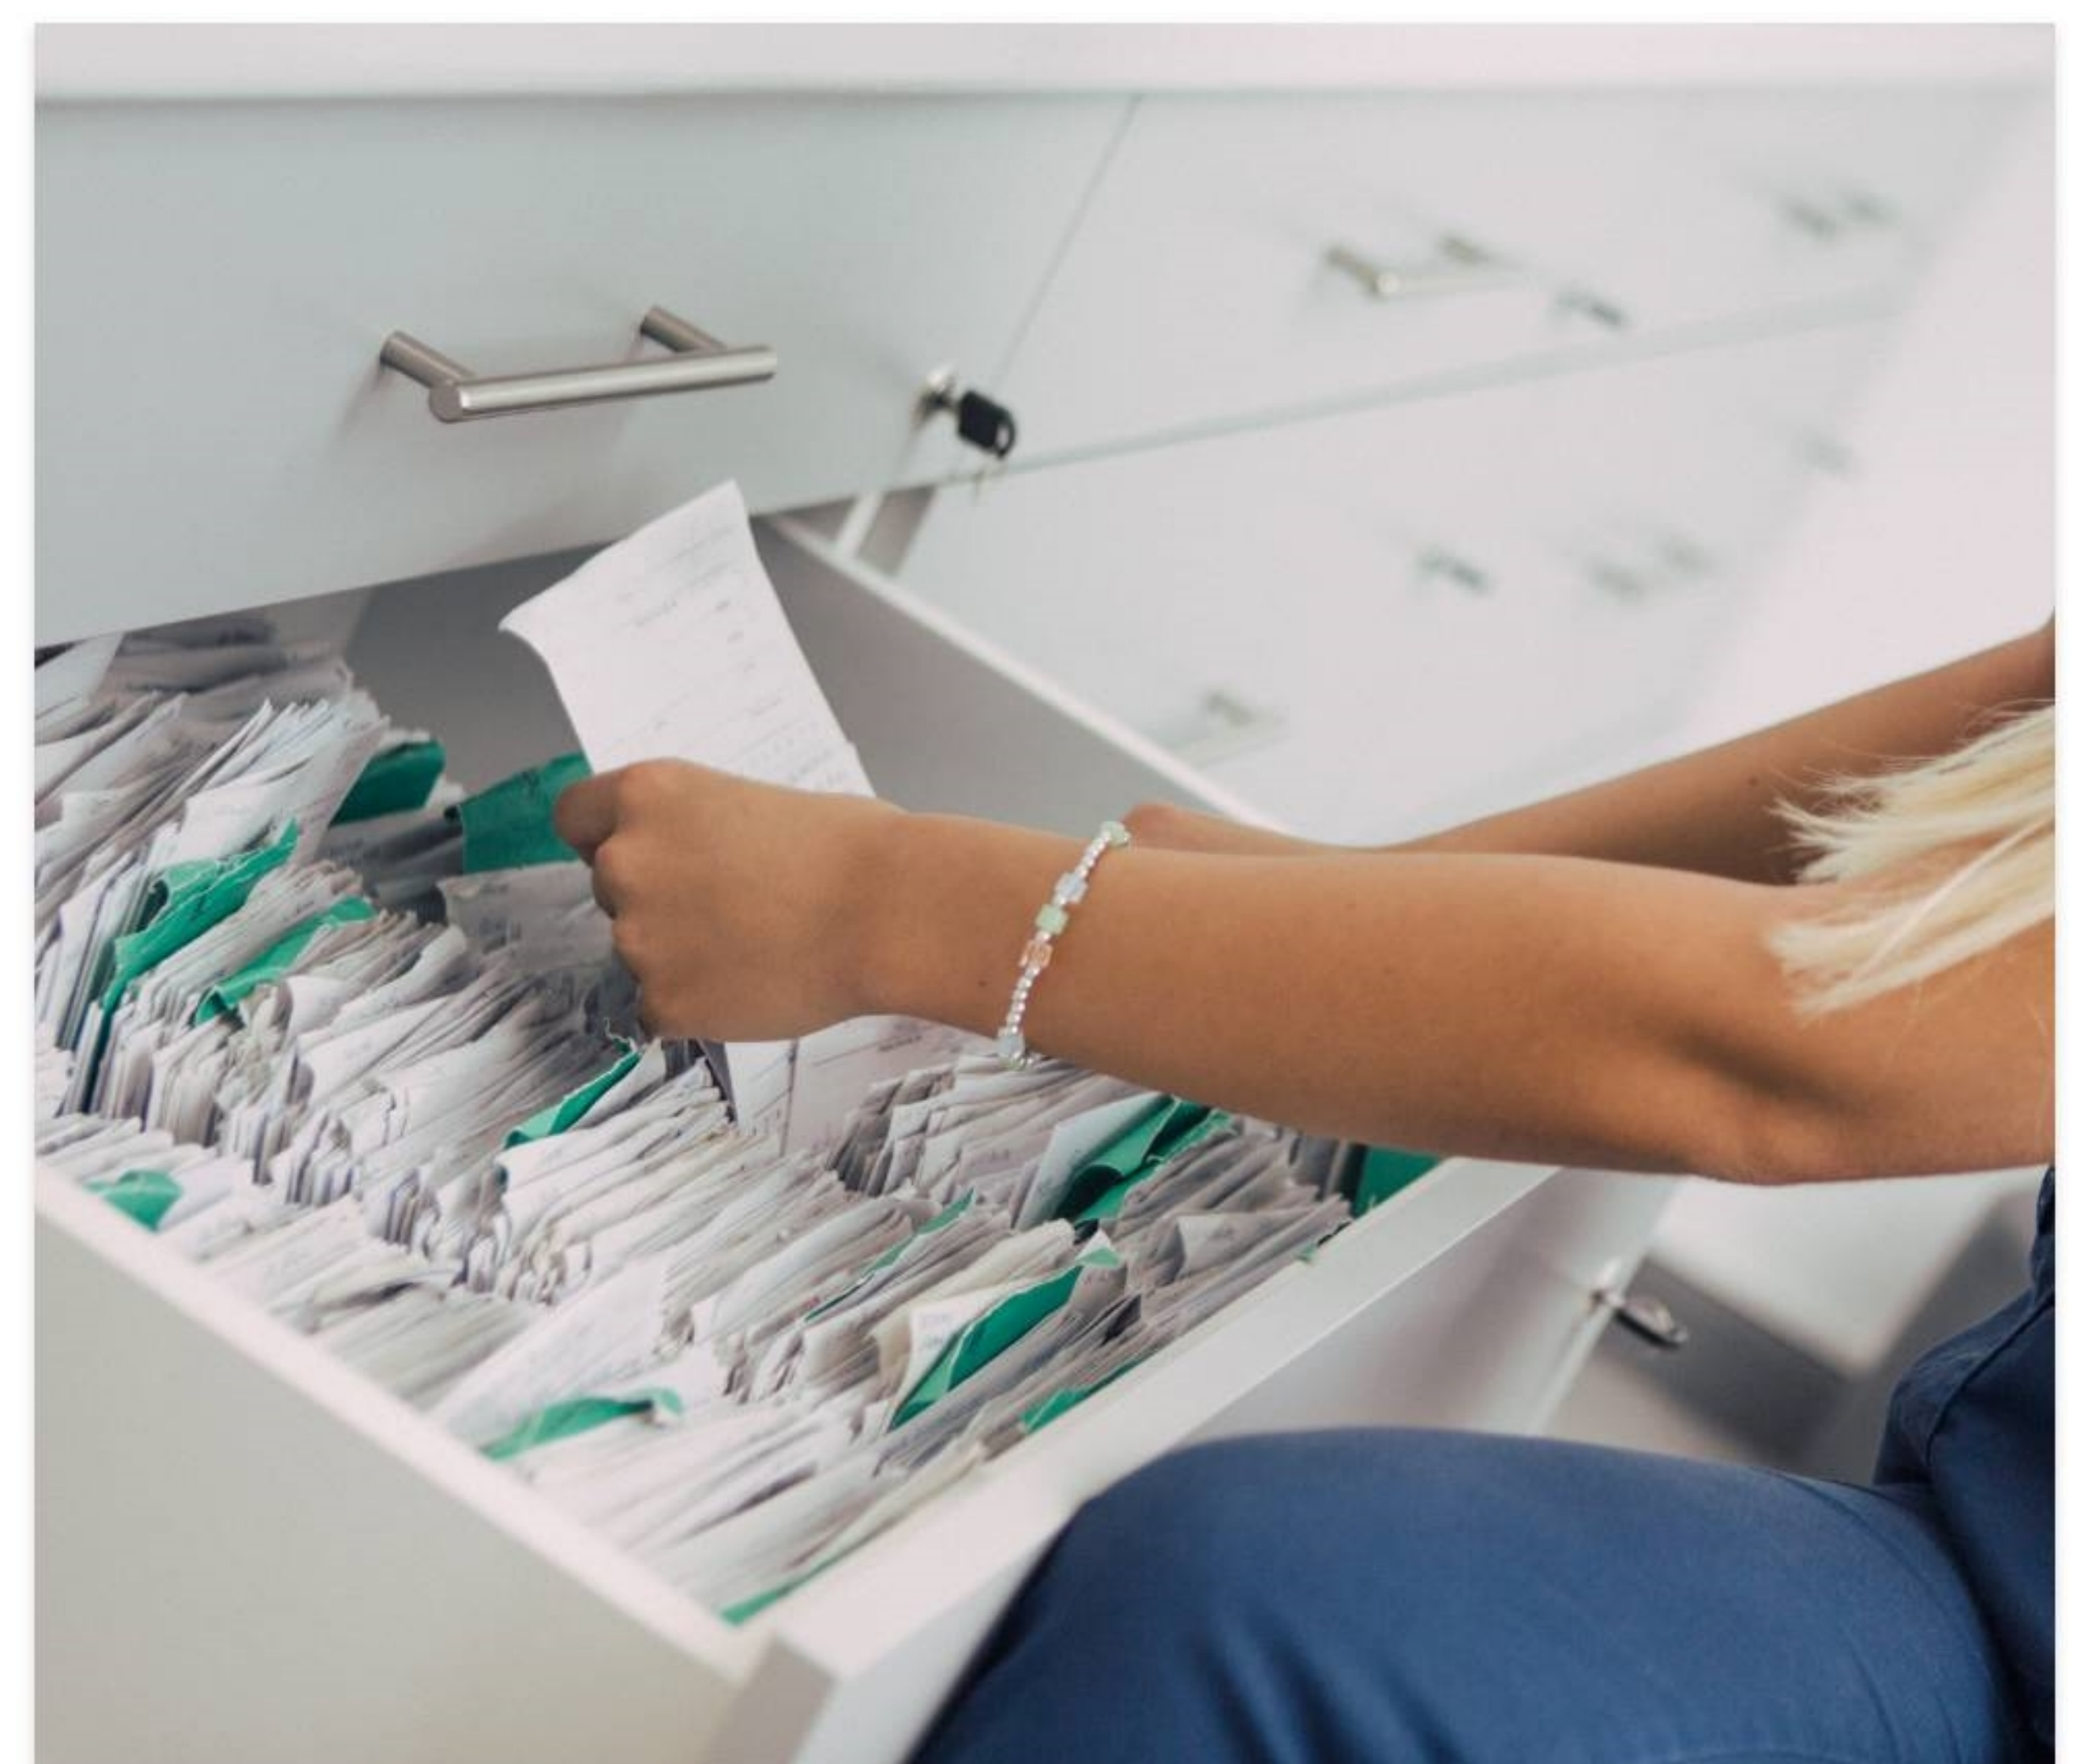

In tune with the last point, as your organization grows, you may find yourself leveraging more software for various purposes. Software solutions such as CRM and HRIS can benefit your organization and specific departments in numerous ways. In addition, more and more organizations are beginning to adopt different software solutions. With the many sources of information, there is an increased risk of incorrect information, as well as the need to manage data across these sources. Having your systems integrated will make information more centralized, increase visibility across your business, and enhance organizational efficiency.

Why Work With BAASS? At BAASS, we help growing companies reach their potential by enabling business transformation through the alignment of people, processes and technology. Our objective as a Trusted Advisor is to improve your operational efficiency and increase corporate effectiveness leading you to greater profitability.

Compliance Issues and Requirements

Finding that you're facing difficulties maintaining levels of compliance? Some industries face specific regulations that can be costly to uphold. If you're finding that your organization is spending too many resources to remain compliant, it may be a sign that you've outgrown your system. Furthermore, you may be finding that your current system isn't able to handle the accounting needs of your organization. As transparency becomes more important and compliance becomes more complex, having a system that can handle these issues will alleviate your burden.

Have You Outgrown Your Accounting Software?

Too many spreadsheets

As your business grows, it becomes more difficult to keep track of what's happening across your organization.

With key employees being in and out of the office and spreadsheets all over the place, it can be exhausting trying to find some information.

In addition, your business's pile of data will only keep growing. With accounting software more compatible with your needs, you can expect to have access to information instantly, across various areas of your organization. This also means having access to more timely and accurate data in which you can base decisions off of.

BAASS Input Bridge

This tool makes this process of Excel to Sage 300 or Sage Intacct even simpler. No more manual re-entry in two separate systems, freeing up your staff to spend more time in other areas.

BAASS Data Migration Tool

This tool allows BAASS to migrate any electronic data from any source into your Sage ERP system. This is offered as a service, where the BAASS development team will work with you to migrate your Sage legacy system into your new Sage 300 or Sage Intacct ERP system.
